I've been searching for breakup/heartbreak articles written by dudes (or for dudes, at least), and, no kidding, 95% of the articles are written by chicks and for chicks.

That second tour of duty, it wasn't as bad as the first.

SSRI's were among the first pharmaceuticals that were rationally designed for a particular known biologic target.

TCDD alters the accent of bone definitive genes; however, this meaning is antagonized on resveratrol.
